

THERMA TECH SERIES

Residential Steel Garage Doors

HÖRMANN

Therma Tech

Therma Tech™, Therma Tech II™, Therma Max™ and Tri Tech™ are built using Hörmann's time proven sandwich-type construction. This method of construction has proven itself to be superior over the past twenty years on hundreds of thousands of Hörmann doors in homes across the US and Canada.

Construction

Interior and exterior galvanized prepainted steel skins are pressure laminated to a CFC-free expanded polystyrene (EPS) core. This forms a true and natural Thermal Break. 2" and 3" thick models also have a flexible joint seal running the full width of the doors. The construction is also smoke and flame spread rated. The result is an extremely strong and beautiful maintenance-free garage door with outstanding insulating and sound deadening qualities. Doors have wood grain embossment on exterior face and stucco embossed interior.

Therma Tech doors are available in widths from 6' to 20' wide in 1" increments and from 6' to 14' high in 3" increments using a combination of 18" and 21" high door sections. The maximum door size should not exceed 280 sq. ft.

Compare to 500 Series

500 Series doors are high quality single layer steel that are often used in warmer climates and are typically more economical when quality is desired and thermal efficiency is not a factor.

Construction

Doors are manufactured using 25 gauge steel and have tongue and groove section joints between sections. They are offered with all window options and panel designs except the Contemporary flush design. Optional vinyl backed expanded polystyrene is an available option for acoustical and moderate thermal protection.

*R Values are calculated specifically for the colder climates and offer the best long term insulating value.

NO CFC's / NO HCFC's
